Hiring Team
GOT BAG

Subject: Application for Integration & Automation Engineer

Dear Hiring Team,

Hope you all are doing great!

I came across the opening for integration & Automation Engineer at GOT BAG and it excites me to write a cover letter for this opportunity. I come from a technical background with Bachelor's in Computer Engineering from India and Masters in Artificial Intelligence from Germany, hence the world of AI is not new to me. During my masters I learned the way Large Language Models like ChatGPT works. During my period at Thermo Fisher, I applied what I learned to real world business scenarios.

I was responsible for finding automation opportunities for the Customer Care team operations and I was successful in creating multiple automations which involved scanning incoming emails from customers and categorizing them into Quotes, Orders etc., using OpenAI APIs and power automate. Even as a full time Intern at first and then working student, I successfully automated quote requests for entire DACH, Italy and France region, saving 5 minutes taken to process each email manually and completing that task at live speed (15-20 emails on an average per day, per mailbox).

To visualize and showcase the success of my automations, I also created multiple Power BI dashboards including key KPIs such as success rate, total emails scanned, tokens consumed by my automations etc. Since a majority of my work was with non-technical Customer Care team, I am not new to explaining technical concepts in easy language and cross team conversation about requirements gathering.

During my time at IQVIA, I served as Programming Lead for more than ten global clinical trials across oncology and cardiovascular therapeutic areas. I owned database development timelines, coordinated study start-up activities, collaborated closely with Clinical Operations, Data Management, Biostatistics, and sponsor teams, and ensured high-quality delivery of Medidata Rave EDC solutions. These experiences strengthened my ability to lead complex study lifecycles, manage cross-functional stakeholders, and deliver solutions that meet both regulatory and operational requirements.

I would welcome the opportunity for discussing how my skills could be useful at GOT BAG. Thank you for reading this far, I look forward to hearing from you.

Sincerely,

Nikhil Thorat
